

**ABSTRACT OF THE DISCLOSURE**

5

A deflection gauge dislodging system for performing deflection tests of pipes while permitting the deflection gauge to be readily dislodged from the interior of the pipe should it become stuck in the pipe. The deflection gauge dislodging system includes an elongate deflection gauge for measuring a minimum diameter of a lumen of a pipe. A dislodging apparatus is provided for dislodging the deflection gauge from a lodged condition in the lumen of a pipe. The dislodging apparatus is adapted to impact against the deflection gauge while the deflection gauge is positioned in the lumen of the pipe.
